

FINCH *Winter* **SERVICES**

Finch Winter Services has provided winter maintenance services for commercial, retail and industrial sites located within Morris, Sussex and Warren counties of NJ since 2002. Some of the clients we have serviced over the years include Lowes, The A&P Co, Tractor Supply, USPS, business complex of Morris Plains, public/private township roads, day care centers, property management groups and small business properties.

Operating dozens of specialized units and skilled staff members throughout the winter season with years of experience, Finch Winter Services offers the best service at reasonable rates. We truck our own service materials "in house" and have what it takes to provide exceptional service while keeping your winter budget where it belongs. We are pleased to help you with your winter needs, please call for a free appointment with our Certified Snow Professional or to request a bid for this upcoming winter season.

Owned and operated by a Certified Snow Professional with eleven years industry experience Finch Winter Services utilizes new technologies, strategies, equipment, materials and skilled staff reducing the costs and yielding better results for our clients. Simply put, we have become the best choice in the snow and ice maintenance business.

Finch Winter services brings anti and de-icing material to your location at the lowest cost possible. We truck our own rock salt and liquid anti-icer, we treat our own rock salt, and we apply our own anti and de-icers. Best of all our anti/de-icers that we use are environmentally friendly.

We do not use "sub contractors" that we do not have a long-term relationship with. Finch Winter Services uses its own equipment and partner companies to complete the contracted work load. All of our locations are lead by one of our experienced foreman. All of our equipment is owned, leased or rented with our operators in control. This allows you to deal directly with the company providing your service and always yields better and more cost effective results than having a "middle man".

True 24/7 service throughout the winter. Others claim it, we started it. No matter what time the storm hits we are ready and begin services. Working throughout the storm enables us to keep up on your property and complete the final clean-up in less time. If you require reliable, prompt, safe & exceptional service we are the company for you!

We pre-treat with anti-icer to prevent hardpack from bonding to pavement prior to snow storms. This technique yields a cleaner plow and less de-icing applications after the storm, saving our clients post storm de-icing costs and reducing average maintenance costs over the actual winter seasons.

Finch uses the "sectional" snow pushers by Arctic enabling us to scrape closer to pavement and leave less material behind. The sectional produces a cleaner scrape reducing ice during a storm and reducing de-icer needed after the storm.
